Instructions

1. Ensure you've followed the lessons to set up your Github, git, and VS Code
2. Fill in the below tasks (note it'll save as you go)
3. Once everything is filled in, ensure you click "Submit and Export PDF"
4. Upload the PDF to Github in a `docs/Module1` folder
5. Find the downloaded PDF and move it into the location of your local repository folder (don't use the Github upload option as we want to practice the git commands)
6. Use `git add .` to track all file changes (i.e., the PDF)
7. Use `git commit -m "Uploading M1 PDF"` to record the change and provide a meaningful message
8. Use `git push origin main` to move the changes to the remote repository's `main` branch (Note: Future assignments will have a dedicated branch name for their work)
9. Take the same PDF and upload it to the Canvas submission

Section #1: (10 pts.) Tasks

100%

 Task #1 (2.22 pts.) – Screenshot of VS Code Extensions for this class

100%

Details

- Ensure you have the following extensions
 - PHP Intelephense

Details

- Ensure you have the following extensions
 - PHP Intelephense
 - WakaTime
 - Git Lens
 - MySQL Extension

MySQL installed

WakaTime installed

PHP Intelephense installed

GitLens installed

Task #2 (2.22 pts.) – Screenshot of WakaTime Setup

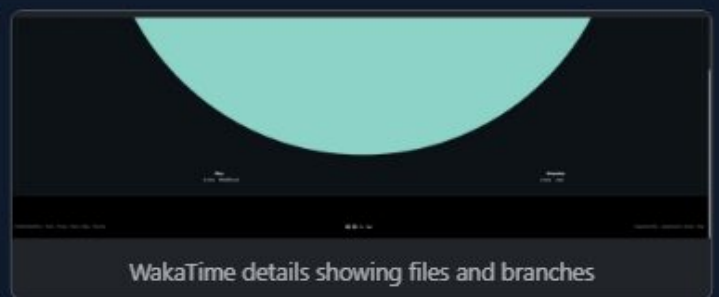

100%

Details

- Visit the WakaTime site
- Click the "Projects" tab and find your repository and select it
- Include a screenshot of the top part that shows the overall time and the repository name
- Scroll down and screenshot the bottom portion that shows the individual files/branches and include that. (You won't need to capture the visuals)

WakaTime details showing tracked language and editors

WakaTime details showing files and branches

Task #3 (2.22 pts.) – Demonstrate that you have PHP available

100%

Details

- Run `php -v` in the terminal
- Run `php --ini` in the terminal
- Record the output (both should work and show proper configuration).

```

PS C:\Users\chriss\OneDrive\Desktop> php -v
PHP 8.3.7 (cli) (built: Jul 2 2024 20:13:51) (ZTS Visual C++ 2022 x64)
Copyright (c) 2019-2024 The PHP Group
Built by the PHP Group
Zend Engine v4.3.7, Copyright (c) Zend Technologies
with Zend OPcache v8.3.7, Copyright (c), by Zend Technologies
PS C:\Users\chriss\OneDrive\Desktop> php -i
Configuration File (php.ini) Path: C:\Windows\php.ini
Loaded Configuration File: C:\Windows\php.ini
Scan for additional .ini files in: (none)
Additional .ini files parsed: (none)
PS C:\Users\chriss\OneDrive\Desktop>

```

Terminal output showing PHP version and PHP configuration files.

Task #4 (1.11 pts.) – Provide Info about your Github Repository

100%

Combo #1

Part 1: Images 100%

Details

Show the Collaborators page with an invite sent out to me [MattToegel](#) and the grader(s) (if applicable: see Canvas module 1 details)

GitHub collaborators page showing pending invite.

Part 2: URLs 100%

Details

Share the link to your github repository. The url should be in the form of <https://github.com/username/ucid-course-section> Include the links to your qa and prod render.com services

Task #5 (2.22 pts.) – Reflection

100%

Details

- Did you have any issues/problems this module? If so, what were they and how did you solve them?
- Did you learn anything new this module? If so, provide some brief details.
- If both answers were no, briefly explain your prior background.

Response

To be honest, I had several setup issues during this module, mainly with Git/GitHub SSH, repository naming, WakaTime, and PHP setup. And I solved them by watching the videos again by going back through the required steps, like adding my SSH key to GitHub and fixing PHP by adding it to PATH and creating a php.ini file with a little with google. Also it's my first time trying out GitHub which confused me a little at the beginning.

steps, like adding my ssh key to GitHub and fixing PATH by adding it to PATH and creating a pipenv file with a little with google. Also it's my first time trying out GitHub which confused me a little at the beginning.

Before this module, I had some general experience using computers and terminals/Vscode, but this helped me understand the actual setup process.
